

FIG. 1 is a schematic diagram of a network architecture. A cloud 30 is connected to a server 20 via a lightning bolt symbol. The server 20 is connected to a headend. The headend is connected to a central line. This central line branches out to three splitters. Each splitter is connected to a tap, which is then connected to a user station (5A, 5B, 5N). Each user station includes a computer and a set of speakers.
